Managing Windows Server

Automated or Interactive?

Secure

Fairly easy

Options...

- Remote Desktop Protocol
- Remote Administrative Server Tools
- Remote Administrative ABCXYZ Tools
- WinRM
- Remote PowerShell

Demo

Looking at the options

Day 0 to 100

- Day 0 = Building/deploying
- Day 1-99 = Manage
- Day 100 = Decommission

Install types

Per client (on your PAW)

Shared (on a Windows Admin Center Server)

Cloud (Azure Arc)

Configuring Windows Admin Center on the PAW

Dark Mode

Extensions

Azure integration

Demo

Using Windows Admin Center on the PAW and integrating with Azure

Shared Windows Admin Center

Less locations to install on

Access from “anywhere”

Issues with double-hop

Lacks LAPS integration

Demo

Install Shared Windows Admin Center

Azure Arc Windows Admin Center

Great Access from Azure

Per server install

Lacks Extensions

Lacks LAPS integration

Require outbound connection to Azure Arc endpoint

Demo

Using Azure Arc and Windows Admin Center

Thank you
